

Short report Job Shadowing at Core Facility Cellular Imaging (CFCI), TU Dresden & Biopolis Dresden Imaging Platform (BioDIP)

Christiane Peuckert (Stockholm University) and Michael Gerlach (Medical Faculty TU Dresden)

After we had to postpone the trip several times due to pandemic related restrictions, I finally could visit my colleagues in Dresden for five days at the end of March 2022. Besides networking and meeting each other for the first time in person after nearly 3 years, we planned knowledge exchange and hands-on training on multiple intravital imaging techniques with a special focus on surgical procedures. Michael Gerlach, my host and responsible for intravital imaging at the CFCI, had thoroughly planned and organized everything: from training sessions, visits at neighboring facilities to taking care of the administration related to laboratory animal work. We had very good discussions, I learnt a lot and met many open and friendly colleagues from the Biopolis Dresden Imaging Platform. I would call this visit a success and would like to thank Micha for the impressive job he did in organizing, teaching and taking really good care of me. Many thanks to the whole CFCI team and the head Thomas Müller-Reichert for hosting and welcoming me - and of course I would like to thank the GerBI for supporting me and funding my travel costs!
